PANEL

Theme: Has BPM Missed the IoT Revolution?

BPM is focused on analysing, discovering, designing, implementing, executing, and monitoring business processes. IoT in contrast is about enabling all things to be connected to the Internet. BPM research has gone largely oblivious of the IoT revolution. The panel will explore the implications of these important areas ignoring each other and whether the damage in terms of lost opportunities could be repaired.

Moderator

Fabio Casati
University of Trento, Italy

Panellists

Arkady Zaslavsky
Data61 CSIRO, Australia

Gero Decker
Signavio

Marlon Dumas
University of Tartu, Estonia
